# How to install a Sublime Text theme

Installing a Colorsublime theme on Sublime Text 2/3 is really simple.
Please make sure to execute correctly all the following steps:

1. Open Sublime text and click on
   Preferences -> Browse Packages

2. Once you are inside the Sublime Text folder called **"Packages"** create a new folder naming it
   "Colorsublime-Themes"

3. Then put the file/files **.tmTheme** just downloaded from our website inside the
   "Colorsublime-Themes" folder

4. Cool! Now you should be able to select your custom themes by browsing
   Preferences -> Color Scheme -> Colorsublime-Themes
